

This piece is a unique combination of Tasmanian Serpentine, Amethyst, Peridot, and Lemon Drop Topaz.

Tasmanian Serpentine *by Nature's Finest Art*

Tasmanian Serpentine is one of our newly discovered stones found only in one mountain range in Tasmania. Green Serpentine is found in various locations in the world but what makes this stone so unique is its rich green color. Tasmania has the only region with vibrant limey green color.

Purple Stichtie combined with the green is what truly sets this stone apart. This is such a rare beautiful color combination that nature has made and a new favorite for jewelry.

There is only one mine, and its stone is already exhausted so what is left is very little. Enjoy it while you can.
